

The dust won't get a chance to settle with a

MaxVak Central Vacuum Cleaning System

Literally. Because all of the dust is expelled to a central unit and then exhausted to the exterior, dust does not have the opportunity to recirculate. The air stays clean and fresh during vacuuming and your house is a healthy place in which to live. These popular systems are innovative, easy and safe to use and up to 70% of new homes in other leading international markets are future-proofing their home with the central vacuum system fitted as standard.

Healthy Living

This system is ideal for those who suffer from asthma and allergies. Unlike a portable vacuum cleaner, the Maxvak system expels air microscopic dust particles to a centralized location and exhausts them outside. Dust-mites will be eliminated and bacteria won't get the chance to spread in carpets, rugs and furniture.

Simple & easy to use

A central vacuum cleaner is convenient to use with no electric cable or having to pull the portable vacuum cleaner behind you. A flexible hose starts the unit automatically when the end is inserted into a vacuum socket or alternatively by using a hose with a switch on the handle.

- Easy to install - new or existing homes
- Manufactured to high European standards
- Powerful range of electric motors
- Full range of innovative accessories
- Meets all relevant NZ/Australian compliance regulations
- 3 Year factory guarantee
- Healthy living as the dust doesn't recirculate
- Stylish & compact vacuum sockets

MaxVax Installation options

MaxVax Model	Motor Wattage (watts)	Air Flow Litres/sec	Dustbin (Litres)	Sockets	Hose Set	Price (ex gst)	Price (incl. gst)
